Access for Deaf and Hard of Hearing

GEMA/HS is working closely with the group All Hands On to provide critical information to the Deaf and Hard of Hearing Community in Georgia. A team of American Sign Language interpreters is embedded at the State Operations Center and is producing informational videos regarding COVID-19 in ASL that are broadcast across our social media platforms. They are also providing interpreting services for Governor's press conferences. Presidential Executive Order 13166 - "Improving Access to Services for Persons with Limited English Proficiency" requires meaningful access consistent with the fundamental mission of the agency. Georgia is in full compliance with this EO.

Why are reporting numbers different?

In order for DPH to report a COVID-19 case or death, the case must be confirmed by the department through testing or postmortem examination. It is a necessary step in ensuring that the information released is accurate. The biggest current lag in reporting is providers receiving results and reporting them to the state, as the state does not directly receive many of the test results. Any private provider who orders a test receives the results and then must report them to the Department of Public Health since COVID-19 is now a reportable disease.

Quarantine vs Isolation

While you may have heard these terms used interchangeably, they mean very different things. Quarantine is what happens when a person is not sick, who has **NOT** tested positive for the virus, separates hin/herself by staying home or sheltering in place.

When a person has tested positive for COVID-19, whether they are well or sick, but do not need to be hospitalized, is placed in isolation, or should isolate from other household members and not go out into the public for any reason.

Coronavirus Risk to Pets

CDC has not received any reports of pets or other animals becoming sick with COVID-19. Currently, in the United States, there is no evidence to suggest that any animals, including pets, livestock, or wildlife, might be a source of COVID-19 infection. However, because all animals can carry germs that may make people sick, it's always a good idea to practice healthy habits around pets and other animals.

- Wash your hands after handling animals, their food, waste, or supplies.
- Practice good pet hygiene and clean up after your pets properly.
- Take pets to the veterinarian regularly and ask if you have questions about your pet's health.

For more information, visit CDC's Healthy Pets, Healthy People website.

How to protect pets if you are sick

If you are sick with COVID-19 (either suspected or confirmed), you should restrict contact with pets and other animals, just like you would around other people. Although there have not been reports of pets or other animals becoming sick with COVID-19, it is still recommended that people sick with COVID-19 limit contact with animals until more information is known about the virus. When possible, have another member of your household care for your animals while you are sick. Avoid contact with your pet including, petting, snuggling, being kissed or licked, and sharing food. If you must care for your pet or be around animals while you are sick, wash your hands before and after you interact with them.

Emotional Health

The outbreak of coronavirus disease 2019 (COVID-19) may be stressful for people. Fear and anxiety about a disease can be overwhelming and cause strong emotions in adults and children. Coping with stress will make you, the people you care about, and your community stronger.

Everyone reacts differently to stressful situations. How you respond to the outbreak can depend on your background, the things that make you different from other people, and the community you live in.

Learn more about taking care of your emotional health here: https://emergency.cdc.gov/coping/selfcare.asp

Caring for Someone at Home with COVID-19

Most people who get sick with COVID-19 will have only mild illness and should recover at home. Care at home can help stop the spread of COVID-19. If you are caring for someone at home, monitor for emergency signs, prevent the spread of germs, treat symptoms, and carefully consider when to end home isolation.

If you develop emergency warning signs, get medical attention immediately. Emergency warning signs include*:

- Trouble breathing
- Persistent pain or pressure in the chest

CDC's COVID-19 Apple App

Apple Inc., in partnership with the White House Coronavirus Task Force and the U.S. Department of Health and Human Services, including the Centers for Disease Control and Prevention (CDC), released an app and website that guides Americans through a series of questions about their health and exposure, to determine if they should seek care for COVID-19 symptoms.

The tool provides CDC recommendations on next steps including guidance on social distancing and self-isolating, how to closely monitor symptoms, recommendations on testing, and when to contact a medical provider.

Users can download the free app from Apple's App Store or access the tool online at **www.apple.com/covid19**. Everyone has a role to play as we work together to stop the spread of COVID-19.
